#### **DESCRIPTIVE NOTES**

The late nineteenth century farmstead at 30860 Yates Avenue is located on 80 acres on the west side of Yates Avenue; it is actively farmed. The farmstead's extant buildings consist of a ca. 1870 upright-andwing farmhouse; ca. 1870 English barn and transverse-frame barn; ca. 1900 drive-through corn crib barn, one-and-one-half-story outbuilding, and one-story outbuilding; ca. 1940 chicken house; and two non-historic pole barns likely constructed ca. 1980. Grassy lawn surrounds the buildings while mature deciduous trees are located throughout the property and form a tree line delineating the property's north boundary. A livestock enclosure is located south of the farmhouse while agricultural fields surround the property in all directions.

The ca. 1870 farmhouse is a modest and altered upright-and-wing house of no discernible style. It consists of a one-and-one-half-story, gable-front portion intersected by a one-story, side-gable wing on its south side elevation. Its original L-shaped plan is obscured by multiple additions to the wing that include a partially enclosed east-facing facade porch; a one-story, gable-roof addition connected to the wing's south side elevation by a short flat-roof wing addition; and a one-story, gable-roof addition along the wing's west rear elevation. The house has a fieldstone foundation while its additions have concrete foundations; the entire house is clad in both wood and vinyl siding. On the original upright-and-wing, the majority of the windows are four-over-four, double-hung, wood-sash windows surmounted by simple wood lintels; two-over-two, double-hung, wood-sash windows are located on secondary elevations. The additions have a mix of two-over-two, double-hung, wood-sash windows and multi-light wood casement windows. The east-facing facade of the gable-front is distinguished by a projecting hipped roof wooden porch leading to a wooden entry door; the porch roof is supported by simple turned wood posts. The eastfacing facade of the wing comprises a full-width porch enclosed by vinyl-sided half walls and one-overone, double-hung, vinyl-sash windows supporting the porch's shed roof. The porch leads to a wooden entry door on the wing's facade and a wooden entry door on the flat-roof wing addition on the south side elevation. The house's roof is covered with asphalt shingles and a narrow brick interior chimney rises from the roof of the wing and its south addition.

The ca. 1900 two-story, gable-roof drive-through corn crib barn sits on a concrete foundation and has a mix of wood and metal ventilated siding. The barn's north and south elevations have sliding double metal doors and a single rectangular opening in the gable end. Its roof is covered with asphalt shingles and is surmounted by a gabled cupola with openings on its east and west elevations. The ca. 1900 English barn and transverse-frame barn are located just west of the corn crib barn. They are clad in wood siding and have metal-clad gable roofs. The English barn is deteriorating and no longer has any doors on its south elevation; only two four-light, wood-sash windows remain on that elevation. The transverse-frame barn has a sliding metal door on its south elevation.

The farmstead also retains two ca. 1900 agricultural outbuildings whose current and historic functions are unknown. They both have concrete foundations, wood siding, and asphalt-shingle roofs. The one-story, gable-roof agricultural outbuilding located along the north side of the driveway has double wood doors on its west elevation, a wood door and four-light wood-sash window on its south elevation, and a six-over-six, double-hung, wood-sash window on its north elevation. Behind and west of the farmhouse, the one-and-one-half-story, gable-roof agricultural outbuilding has a single center wood entry door on its north elevation, two window openings on its north elevation, and no window or door openings on its east elevation.

The ca. 1940 one-story, concrete block, hipped roof chicken house is located directly west of the farmhouse. Its south elevation contains multiple square openings leading to a small shed-roof wooden lean-to structure. Its east elevation has a wooden entry door and its north elevation has no window or door openings. Its hipped roof is covered with asphalt shingles and surmounted by a small hipped-roof cupola.

The farmstead's ca. 1980 one-story, gable-roof pole barn is located near Yates Avenue while its ca. 1980 one-and-one-half-story, gable-roof pole barn is located at the west end of the driveway. Both buildings are clad in corrugated metal siding and roofing. The one-story pole barn has a large sliding metal door on its south elevation and no window or door openings on its east elevation. The one-and-one-half-story pole barn has a large sliding metal door on its east elevation and a shed roof addition along its south elevation that contains a second smaller sliding metal door on its east elevation.

#### HISTORY/DEVELOPMENT

The late nineteenth century farmstead at 30860 Yates Avenue appears to have been established ca. 1870 by Ernest Busse based on plat maps and US Census data. Ernest Busse owned the 80-acre property from at least ca. 1870 until ca. 1909; he also owned the 46-acre east parcel across Yates Avenue for a total of 126 acres. He likely erected the ca. 1870 upright-and-wing farmhouse. Ernest Busse was a general farmer and German immigrant. He and his wife Sophia Busse lived on the farm with their eight children. Research did not reveal the type of agricultural activities in which Ernest Busse was involved.

By 1909, Fred Wehrmann had purchased the 80-acre and 46-acre parcels. He was a general farmer and German immigrant who had lived in Washington Township since at least 1880 with his wife Frederika and children, August, William, Carrie, Fred, Henry, Herman, Anna, and Amalie. Fred Wehrmann owned the property but from nearly the beginning of the family's occupation of the property, his son Fred Wehrmann, Jr. rented the farmstead from his father. Fred Wehrmann Jr., his wife Emma, and their four sons lived and worked on the 126-acre farmstead. The 1918 farmer's directory lists Fred Wehrmann Jr. as a renter but does not indicate the type of agricultural activities in which he was engaged. Upon his father's death in 1926, Fred Wehrmann Jr. inherited the property and owned it until his death in 1949. At that time, the property was held in the Fred Wehrmann Estate and research indicates his wife Emma lived there until her death in 1979.

In 1955, Fred Wehrmann Jr.'s son, Orvil Wehrmann managed the farm and the aerial photograph from

that date shows the farm may have bred beef cattle or hogs. The 126-acre property, consisting of both the 80-acre and 46-acre parcels, remained part of Fred Wehrmann's estate through at least 1980. In 1988, the 80-acre parcel was owned by a Peotone Bank Trust while the 46-acre parcel was owned by another of Fred's sons, Lester Wehrmann. By 1996, the 80-acre parcel was owned by the Glen Cooper Trust, which continues its ownership today. The farm engages in grain farming and small-scale livestock operations.

Principal farm crops in Illinois by the 1850s included corn, wheat, oats, rye, and barley. Corn could be fed to livestock as well as processed into other products. Farmers in northeastern Illinois also raised cattle, hogs, and sheep and to a lesser extent, horses. Cattle were raised for beef and dairy purposes. By 1900, the number of farms, livestock production, and dairy production in the Chicago area peaked and began declining in the following decades. This decline was exacerbated in the post-World War I era and during the Great Depression as demand for agricultural goods decreased and commodity prices fell. In the late 1930s, soybeans were first planted and primarily used to feed dairy cows and beef cattle and later became a valuable food and commercial product. In the second half of the twentieth century, many farms were abandoned, and small farms were consolidated into large ones; suburban development in rural areas contributed to the declining number of farms. This resulted in many older agricultural outbuildings being demolished or abandoned and replaced by larger structures, such as pole barns. This farm appears to have been engaged in general farming with some livestock specialization in the early twentieth century.

A 1955 aerial photograph shows the farmstead was once much larger. In addition to its extant farmhouse and agricultural outbuildings, it included what appear to be a large two-story bank or English barn, a hog barn, and a small pond. The bank or English barn was replaced by the one-and-one-half-story ca. 1980 pole barn. It is unknown when these buildings were demolished. The farmhouse's wing additions do not appear to be present in the aerial photograph and post-date 1955. The property also appears to have had enclosed pastures northwest of the farmstead buildings and east across South Yates Avenue on the 46-acre parcel formerly associated with the farmstead.

The farm's ca. 1870 farmhouse is a modest and altered example of the upright-and-wing form. This form evolved from the gable-front house out of a need for additional space and is predominantly found in the Great Lakes region. The gable-front was a dominant house type that rose to popularity throughout the United States during the Greek Revival era and was a dominant, often unornamented, folk form in rural areas well beyond the antebellum era. The upright-and-wing house is characterized by a one or one-and-one-half-story wing attached to the two-story gable-front portion of the house, forming a T-shape. Early examples of upright-and-wing houses feature heavy friezes, cornice returns, and classical entries due to the Greek Revival influence of the period. After that period, the upright-and-wing house is generally unornamented. This farmhouse is of no discernible style and its original upright-and-wing form has been significantly altered and obscured by multiple additions and replacement materials. These alterations are evident on all elevations of the one-story wing and substantially alter the house's original appearance.

The farm's ca. 1900 drive-through corn crib barn is a basic example that retains its original openings and cupola but has been clad in a mix of non-historic perforated metal and vinyl siding. Granaries and corn cribs were constructed on the farm to hold agricultural produce and feed. Corn cribs were typically constructed of wire mesh or slatted wood cribs to allow air to circulate around the corn. Found in large numbers throughout northern Illinois and generally dating from the early twentieth century, the corn crib barn is descended from the single crib barn. They comprise a series of wooden-slat cribs, usually three on each side of the central aisle. The cupola provides headroom for the interior mechanized elevator.

The farmstead's ca. 1900 transverse frame barn and English barn are basic and somewhat deteriorated examples. The dominant barn type in the Midwest was the English barn, which was introduced to New

England by English settlers. Its primary purpose was grain processing and storage. The rectangular and timber-framed English barn has vertical siding and few windows. Its primary entrance, typically consisting of double doors, is located on the barn's long side, unlike the transverse-frame barn where it is located in the gable end. The English barn is divided into three bays with the center bay used as a threshing area and the flanking bays used for grain and hay storage.

The farmstead's ca. 1980 pole barns are basic and intact examples whose original use is unknown, but appear to now house farm equipment and machinery. Pole barns were increasingly constructed in the post-World War II period when barn building techniques dramatically changed. Traditional building techniques were superseded by the construction of pole barns and prefabricated structures, which were more cost-effective for farmers. These were commonly constructed of treated wood posts and corrugated steel, respectively, and clad in corrugated sheet metal.

#### NRHP EVALUATION/JUSTIFICATION

The farmstead at 30860 Yates Avenue was evaluated for listing in the National Register of Historic Places (NRHP) under Criteria A, B, and C using guidelines set forth in the NRHP Bulletin "How to Apply the National Register Criteria for Evaluation."

The farmstead at 30860 Yates Avenue is associated with late nineteenth and early twentieth century farming in Will County. However, the farmstead appears to be typical of its period and does not appear to have made significant contributions to local farming practices. Therefore, the farmstead at 30860 Yates Avenue is not eligible under Criterion A.

The farmstead at 30860 Yates Avenue is associated with the Busse and Wehrmann families, who were local farming families in Washington Township from the mid-nineteenth to mid-twentieth century. Although several members of the Wehrmann family owned and farmed the farmstead for approximately 70 years, research did not reveal any known historically significant associations with their productive lives. Further, they are not known to have significantly contributed to local farming practices. Therefore, the farmstead at 30860 Yates Avenue is not eligible under Criterion B.

The farmstead at 30860 Yates Avenue retains a modest and significantly altered upright-and-wing farmhouse of no discernible style. The farmhouse's original form and appearance is significantly obscured by multiple additions and the house lacks architectural distinction. The farmstead does not retain the majority of its original agricultural outbuildings. Those that remain are modest examples of their type and they do not exhibit any architectural significance or distinction. Therefore, the farmstead at 30860 Yates Avenue is not eligible under Criterion C.

The farmstead at 30860 Yates Avenue was not evaluated for eligibility under Criterion D as part of this assessment.

Therefore, the farmstead at 30860 Yates Avenue is not recommended eligible for listing in the NRHP.

#### **DESCRIPTIVE NOTES**

The late nineteenth century farmstead at 32112 State Line Road is an active farmstead that consists of a 1903 farmhouse with a ca. 1930 rear addition; the remnants of a former potato cellar from a demolished ca. 1900 bank barn; a ca. 2000 non-historic detached garage; and five non-historic pole barns and six non-historic metal grain bins constructed within the last fifteen years. With the exception of the potato remnant cellar, the farmstead does not retain any of its original agricultural outbuildings. The farmstead is located on 128 acres on the west side of State Line Road. Grassy lawn surrounds the buildings while mature deciduous trees are located throughout the property; a tree line of evergreens is located along the farmstead's north, south, and west boundaries. Agricultural fields surround the farmstead to the north, south, and west.

The 1903 farmhouse is a modest and altered two-story, hipped-roof American Foursquare characterized by Colonial Revival stylistic references that include shed dormers, a basement-level stone belt course, and a slight eave overhang boxed with dentils and elaborated by decorative wood scroll brackets. The house is altered by a ca. 1930 one-story, gable-roof addition on its west rear elevation, a partial-width porch on the north side elevation, and relocated door openings on its east-facing facade and north side elevation. The house has a concrete foundation and is clad in brick. The majority of its windows are tall one-over-one, double-hung, replacement vinyl-sash windows with concrete sills and lintels; the dormers have single pane vinyl casement windows. The east-facing facade has an off-center, hipped-roof, partialwidth porch supported by brick piers. The porch leads to the off-center replacement double-door entrance; brick-infilled rectangles on the facade and a triangular marking on the brick above the existing porch roof indicate the former location of the facade door and possibly the porch. Similarly, the north side elevation has brick-infilled rectangles possibly indicating the removal of original window openings or the relocation of a side entry door. A hipped roof partial-width porch supported by brick piers leads to the north side elevation's replacement entry door. The house's hipped roof is covered with asphalt shingles, two shed dormers on the north and south side elevations, and a single shed dormer on the east-facing facade; a narrow brick interior chimney rises from the hipped roof while a narrow exterior brick chimney is

located on the addition's west rear elevation.

West of the farmhouse, the farmstead's ca. 2000 detached garage is a one-story, hipped-roof building with two one-car overhead garage doors on its west elevation and an entry door and double-hung window on its north elevation. The garage has a concrete foundation and brick cladding derivative of that found on the farmhouse; its roof is covered with asphalt shingles.

Further west of the farmhouse are the remnants of the former potato cellar that was part of the demolished ca. 1900 bank barn. The remnant potato cellar is set into a gently sloped hill and is constructed of concrete. A single large opening leads into the cellar.

The farmstead's five non-historic pole barns and six non-historic metal grain bins are located north, northwest, and west of the farmhouse. The pole barns are one to two-story buildings clad in corrugated metal siding and roofing and the metal grain bins are cylindrical, nearly two-story structures with conical roofs.

#### HISTORY/DEVELOPMENT

The late nineteenth century farmstead at 32112 State Line Road was established in 1869 by Henry Vashage, a German immigrant and farmer who immigrated to the United States in 1860. Henry Vashage and his wife, Dorothea lived on the farmstead with their children Fred, August, William, Anna, and Herman. The farmstead no longer retains the farmhouse or agricultural outbuildings from its establishment or Henry Vashage's period of ownership. By 1893, his son, Fred Vashage owned and farmed the property, living there with his wife Anna, their children Anna and Emma, his brother Herman, and his father Henry who by 1900 was a widow. Henry Vashage died in 1903.

Fred Vashage likely erected the 1903 farmhouse as well as the former bank barn and extant potato cellar. In 1914, Fred's daughter Anna married William F. Herlitz and the couple rented the farm from her father, who also lived with them. The 1918 farmer's directory lists William F. Herlitz, his wife Anna, and their children Wilbur, Edna, and Myrtle as tenants on the then-228 acre farmstead owned by Fred Vashage. William F. Herlitz bred Holstein dairy cattle, Chester White hogs, and Barred Plymouth Rock chickens; the directory also stated that the farmstead had a tile silo. He also owned a Buick automobile and tractor. By 1930, William and Anna Herlitz had two additional children, William L. and Roger R., and continued to rent the farmstead from her father, who along with Anna's sister Emma, lived with them.

Upon Fred Vashage's death in 1938, William F. Herlitz inherited the farmstead and farmed the property until his death in 1977. Plat maps indicate that in 1957, the property's ownership was transferred solely to Anna Herlitz and she is listed as the owner until 1988 when her son William L. Herlitz and his wife Helen are listed as the property owners. The property was placed in the William L. Herlitz Trust by 2000 and upon his death in 2012, the property was inherited by his son Mark Herlitz who continues to live on and farm the property, which is now a cash grain farm.

Principal farm crops in Illinois by the 1850s included corn, wheat, oats, rye, and barley. Corn could be fed to livestock as well as processed into other products. Farmers in northeastern Illinois also raised cattle, hogs, and sheep and to a lesser extent, horses. Cattle were raised for beef and dairy purposes. By 1900, the number of farms, livestock production, and dairy production in the Chicago area peaked and began declining in the following decades. This decline was exacerbated in the post-World War I era and during the Great Depression as demand for agricultural goods decreased and commodity prices fell. In the late 1930s, soybeans were first planted and primarily used to feed dairy cows and cattle and later became a valuable food and commercial product. In the second half of the twentieth century, many farms were abandoned, and small farms were consolidated into large ones; suburban development in rural areas contributed to the declining number of farms. This resulted in many older agricultural outbuildings being demolished or abandoned and replaced by larger structures, such as pole barns. This farm appears to

**SURVEY ID 504** 

have been engaged in general farming with some livestock specialization in the early twentieth century and is now engaged exclusively in cash grain farming.

A ca. 1940 aerial photograph provided by the current owner and a 1955 aerial photograph show the farmstead originally had at least 15 agricultural outbuildings of various sizes and types that included a drive-through corn crib barn, a bank barn, transverse-frame barns, and a silo. All of these buildings have since been demolished and replaced by non-historic pole barns, some as recently as within the last fifteen years. The historic photographs also show extensive vegetable gardens just south of the house, a small grove of trees north of the existing driveway, a tree line along the driveway's north side, a more heavily defined tree line of evergreens along the north and west sides of the farmstead, several farm lanes leading from the farmstead to the adjacent pastures and agricultural fields, and generally more trees located throughout the farmstead property. Additionally, the ca. 1940 aerial photograph shows the farmhouse had extensive foundation plantings and the existing north side elevation porch does not appear to be present; the west rear elevation addition can be seen on the photograph.

The farmstead's extant 1903 farmhouse is a modest and altered example of the American Foursquare form, which was a dominant house form that rose to popularity in the United States from approximately 1890 to 1930. The American Foursquare is also sometimes distinguished from rural interpretations that were commonly called the vernacular Prairie, cornbelt cube, or Midwest box. It was frequently distinguished by Colonial Revival, Neoclassical, Prairie, Tudor, or Craftsman influenced stylistic detailing, unlike its rural counterparts, which remained relatively plain. The American Foursquare also typically had a low-pitched, hipped roof with attic dormers; wide, enclosed eaves; and a one-story porch spanning the width of the facade. This farmhouse retains its original American Foursquare form but it is obscured by porch additions and a ca. 1930 one-story addition on the west rear elevation. It has also been significantly altered by the infilling and relocation of its original door and window openings on the east-facing facade and north side elevation as well as by extensive vinyl-sash window replacement. It incorporates only a few Colonial Revival stylistic elements and it is not a representative example of the style, which typically had accentuated front doors with a decorative pediment, pilasters and/or columns supporting the entry porch, symmetrically balanced windows and a center door, paired windows, multi-pane glazing in one or both double-hung window sashes, and sometimes highly elaborated cornices.

The farmstead's non-historic pole barns are basic and intact examples that support current farm operations and house farm equipment and machinery. Pole barns were increasingly constructed in the post-World War II period when barn building techniques dramatically changed. Traditional building techniques were superseded by the construction of pole barns and prefabricated structures, which were more cost-effective for farmers. These were commonly constructed of treated wood posts and corrugated steel, respectively, and clad in corrugated sheet metal.

The farmstead at 32112 State Line Road is associated with early twentieth century farming in Will County. However, the existing property no longer conveys this association because it only retains its original farmhouse and the remnants of a remnant potato cellar and does not retain any of its other original agricultural outbuildings from its establishment and general farming period. Research did not reveal it to have made significant contributions to local farming practices or the broad agricultural patterns of Will County, Illinois, or United States history. Therefore, the farmstead at 32112 State Line Road is not eligible under Criterion A.

The farmstead at 32112 State Line Road is associated with the Vashage and Herltiz families, who were local farming families in Washington Township from the late nineteenth century to the present day. Although several members of the Vashage and Herlitz families have owned and farmed the farmstead for approximately 144 years, research did not reveal any known historically significant associations with their productive lives. Further, they are not known to have significantly contributed to local farming practices. Therefore, the farmstead at 32112 State Line Road is not eligible under Criterion B.

The farmstead at 32112 State Line Road only retains its 1903 farmhouse and remnants of its ca. 1900 potato cellar and does not retain any other outbuildings associated with its agricultural history. The farmhouse is a modest and significantly altered example of an American Foursquare house incorporating Colonial Revival stylistic references. The farmhouse's original form and appearance have been obscured by the ca. 1930 west rear elevation addition as well as the infilling and relocation of original door and window openings on the facade and north side elevations. Replacement materials, such as the vinyl-sash windows, also diminish its integrity. Further, the farmhouse is not an architecturally significant or distinctive example of an American Foursquare or Colonial Revival-style house. Additionally, the overall farmstead does not retain many of its original landscape features, such as its vegetable garden, farm lanes, and tree lines. Therefore, the farmstead at 32112 State Line Road is not eligible under Criterion C.

The farmstead at 32112 State Line Road was not evaluated for eligibility under Criterion D as part of this assessment.
